Web Site With The Original Neural Searching
(A new search engine for the Internet, http://www.*answers*.com, uses
neural technology)
Newsbytes News Network, p. N/A
December 12, 1996
DOCUMENT TYPE: Journal (United States)

ABSTRACT:

The ultimate in a long evolving neural technology has created the most flexible Internet search engine yet developed. No more need to robotize your search criteria, the new system will take everyday speech and grammar with no need for connectors or keyword phrases. But it's not free. The site, http://www.*answers*.com debuted on the World Wide Web with this new neural search product. All a user has to do is ask a question, and they will get an answer backed with citations, references, and links to additional information. If the neural engine doesn't understand, it can even ask specific questions back to further limit the search. Slightly slower than less complicated search technology, the new service is specific, easy to use, and as is the case with all breaking technology, more expensive.

The questions are asked over the Internet, but a live person finds the answers. [*Answers*.com](http://www.*answers*.com) is limited to the availability of people to field the questions. When asked by Newsbytes how many people were available to handle the questions, we were told that 40 advisors are available, about half of these full-time researchers. Answers are delivered via e-mail within 24 hours. An expedited service is available for a small additional charge. The site features an \$8 free trial, and can be found at http://www.*answers*.com. No additional significant information is in the full text.

TEXT:

PASADENA, CALIFORNIA, U.S.A., 1996 DEC 12 (NB) -- By Richard Bowers. The ultimate in a long evolving neural technology has created the most flexible Internet search engine yet developed. No more need to robotize your search criteria, the new system will take everyday speech and grammar with no need for connectors or keyword phrases. But it's not free.

The site, http://www.*answers*.com debuted today on the World Wide Web with this new neural search product. All a user has to do is ask a question, and they will get an answer backed with citations, references, and links to additional information. If the neural engine doesn't understand, it can even ask specific questions back to further limit the search. Slightly slower than less complicated search technology, the new service is specific, easy to use, and as is the case with all breaking technology, more expensive.

It's slower and more expensive because [*answers*.com](http://www.*answers*.com) is powered by human beings. The questions are asked over the Internet, but a live person finds the answers. [*Answers*.com](http://www.*answers*.com) is limited to the availability of people to field the questions. When asked by Newsbytes how many people were available to handle the questions, we were told that 40 advisors are available, about half of these full-time researchers.

"In the information technology age we often encounter too much information when a direct answer is what is needed," said Clemente Izzi, CEO of [*answers*.com](http://www.*answers*.com). "By combining published information, proprietary databases, and electronic data with the personal knowledge of qualified

individuals, *answers*.com* delivers specific information rather than 10,000 hits generated by automated search engines."

There are limits to this service. Don't everyone try to ask questions at once. Unlike non-human search engines which can handle thousands of inquiries at a time, this service is limited to a few "technical advisors."

To get an answer to a question a user enters a question, and then chooses the degree of research they think will be required to answer the question. Newsbytes was told that for now, an honor system is in place, where the user selects the amount of research required for the question and submits the request.

The site charges based on three levels of questions. Fast facts like, "Who won an Academy Award for best supporting actress in 1971?" cost \$1.79 for each answer. Questions requiring moderate research like "Do any restaurants in the New York theater district accept e-mail reservations?" cost \$5.99. Extended research for questions like "How is imaging technology used in the insurance industry?" or "What kinds of coatings are used on blister cards to allow them to stick to the blister?" costs \$11.99.

Answers are delivered via e-mail within 24 hours. An expedited service is available for a small additional charge. The site features an \$8 free trial, and can be found at <http://www.answers.com>.
